

## **The advantages and disadvantages of e-books versus paper books.**

In one thousand four hundred and forty-nine, Johannes Gutenberg printed the first book on history, since then, books are one of the best forms for perpetuate information. Now we can have a lot of books on the hand thanks to technology, but traditional paper books still alive.

Firstly, on my opinion, e-book have a lot of advantages over traditional paper books, one of the best has, the ecologism. One book needs a lot of trees and water for to be made, on e-book has a lot of pages but zero paper, in addition, you can transport a lot of books for travel and you can buy more with an internet connection and credit card. Another advantage is that the price of e-books is cheaper than paper books.

On the other hand, paper books feels good on the hand, read a terror (or another type of book) book on paper feels really better than on a e-book. Also, for study, for mark, for take annotations, paper books are favorite option for study. Another disadvantage is that the electronic garbage, as a result of the obsolescence, we have mountains of the electronic garbage, this is a seriously global problem because some components are not recyclable.

To sum up, i think twice options has good for different thinks. The e-book for have great collection and travel or for carry around for go work, consult technical pdf, however, paper feels like a personal think, turns the pages reading a good history is an immersive experience. I have around eighty Stephen king books, I love it. All of my collection has on paper, doesn't like e-book for read my favorite author.
